

## LDL-C Select FS\*

Diagnostic reagent for quantitative in vitro determination of low density lipoprotein cholesterol (LDL-C) in serum or plasma on DiaSys respons<sup>®</sup>910

#### **Order Information**

Cat. No. 1 4121 99 10 921

4 twin containers for 120 tests each

#### Method

Previous LDL-cholesterol determinations were performed indirectly by calculation from the combined results of total cholesterol, HDL cholesterol and triglycerides using the Friedewald equation [1]. LDL-C Select FS is a homogeneous method without centrifugation steps for the direct measurement of LDL-cholesterol. In a first step, LDL is selectively protected while non-LDL-lipoproteins are enzymatically processed. In a second step, LDL is released and LDL-cholesterol selectively determined in a color producing enzymatic reaction.

#### **Principle**

#### Reagents

#### **Components and Concentrations**

R1:	Good's buffer Cholesterol esterase Cholesterol oxidase N-(2-hydroxy-3-sulfop 3,5-dimethoxyaniline	(CHO) ropyl)-	2	20 mmol/L ≥ 2.5 kU/L ≥ 2.5 kU/L .5 mmol/L
R2:	Catalase Good's buffer 4-Aminoantipyrine Peroxidase	pH 7.0 (POD)	3	± 500 kU/L 25 mmol/L .4 mmol/L ≥ 15 kU/L

#### Storage Instructions and Reagent Stability

The reagents are stable up to the end of the indicated month of expiry, if stored at 2 - 8 °C, protected from light and contamination is avoided. DiaSys respons containers provide protection from light. Do not freeze the reagents!

## Warnings and Precautions

- Reagent 2 contains sodium azide (0.95 g/L). Do not swallow! Avoid contact with skin and mucous membranes.
- Artificial lipid mixtures (e.g. Intralipid<sup>®</sup>) may interfere with the test. Serum samples from patients treated with such solutions should not be used
- Determination of samples from patients with a rare type of Hyperlipoproteinemia (Hyperlipoproteinemia Type III) may lead to false results
- In very rare cases, samples of patients with gammopathy might give falsified results.
- Please refer to the safety data sheets and take the necessary precautions for the use of laboratory reagents. For diagnostic purposes, the results should always be assessed with the patient's medical history, clinical examinations and other findings.

### Waste Management

Please refer to local legal requirements.

## Reagent Preparation

The reagents are ready to use. The bottles are placed directly into the reagent rotor.

#### **Specimen**

Serum or heparin plasma

Stability [2]:

1 day at 20-25 °C 7 days at 4-8 °C 3 months at -20 °C

Discard contaminated specimens. Freeze only once

#### Calibrators and Controls

For calibration, DiaSys TruCal Lipid calibrator is recommended. The assigned values of the calibrator have been made traceable to the NIST-SRM®-1951 Level 2 reference material. For internal quality control a DiaSys TruLab L control should be assayed. Each laboratory should establish corrective action in case of deviations in control recovery.

	Cat. No.	Kit size
TruCal Lipid	1 3570 99 10 045	3 x 2 mL
TruLab L Level 1	5 9020 99 10 065	3 x 3 mL
TruLab L Level 2	5 9030 99 10 065	3 x 3 mL

#### **Performance Characteristics**

Measuring range up to 400 mg/dL LDL-C (in case of higher concentrations re-measure samples after manual dilution or use rerun function).		
Limit of detection**	2 mg/dL LDL-C	
On-board stability	4 weeks	
Calibration stability	10 days	

Interfering substance	Interferences < 10%	LDL-C [mg/dL]	
Ascorbate	up to 30 mg/dL	96.1	
Hemoglobin	up to 350 mg/dL	60.3	
	up to 550 mg/dL	85.2	
Bilirubin, conjugated	up to 70 mg/dL	64.9	
	up to 70 mg/dL	93.4	
Bilirubin, unconjugated	up to 80 mg/dL	62.5	
	up to 80 mg/dL	88.9	
Lipemia (Lipofundin)	up to 190 mg/dL	60.3	
Lipemia (triglycerides)	up to 200 mg/dL	74.7	
For further information on interfering substances refer to Young DS [3].			

Precision		•	
Within run (n=20)	Sample 1	Sample 2	Sample 3
Mean [mg/dL]	62.2	84.5	127
Coefficient of variation [%]	2.66	2.62	2.25
Between run (n=20)	Sample 1	Sample 2	Sample 3
Mean [mg/dL]	63.1	88.7	127
Coefficient of variation [%]	4.05	4.40	1.73

Method comparison (n=91	)
Test x	DiaSys LDL-C Select FS (Hitachi 917)
Test y	DiaSys LDL-C Select FS (respons®910)
Slope	0.999
Intercept	0.546 mg/dL
Coefficient of correlation	0.988

<sup>\*\*</sup> Lowest measurable concentration which can be distinguished from zero mean + 3 SD (n=20) of an analyte free specimen.

#### **Conversion factor:**

LDL-Cholesterol [mg/dL] x 0.0259 = LDL-Cholesterol [mmol/L]

#### Reference Range [4]

 $\begin{array}{ll} \mbox{Desirable} & \leq 130 \mbox{ mg/dL } (3.4 \mbox{ mmol/L}) \\ \mbox{Borderline high risk} & 130 \mbox{ -160 mg/dL } (3.4 \mbox{ -} 4.1 \mbox{ mmol/L}) \\ \mbox{High risk} & > 160 \mbox{ mg/dL } (> 4.1 \mbox{ mmol/L}) \end{array}$ 

Each laboratory should check if the reference ranges are transferable to its own patient population and determine own reference ranges if necessary.

#### **Clinical Interpretation**

The European Task Force on Coronary Prevention recommends to lower TC concentration to less than 190 mg/dL (5.0 mmol/L) and LDL-cholesterol to less than 115 mg/dL (3.0 mmol/L) [4].
